## Reviewer Form

### 1. Paper categorisation recommendation

Following the guidelines presented further in this form, please indicate your recommended categorisation of the paper unambiguously, by underlining or bolding the appropriate category among those offered.

#### A. Original scientific paper.

A scientific contribution can be of a research or theoretical nature. Original scientific papers contain unpublished results of original scientific research in their entirety, meaning that they include analytical, interpretational, and methodological levels of data, facts, and terminology present in the text, i.e. they use scientific argumentation and have scientific credibility. Theoretical original scientific papers include a systematic critical overview, meta-analytical contribution, and, mandatorily, their own analytical or theoretical contribution.

#### B. Preliminary communication.

A scientific paper that includes unpublished preliminary research results or a theoretically presented scientific problem equipped with analytical argumentation, but without a full elaboration.

#### C. Scientific review.

A scientific paper that contains an original critical exposé of a research area or theoretical problem, with referral to existing contributions in domestic and foreign sources. It must contain a description of the current state and tendencies in the researched area.

#### D. Professional paper.

A professional paper contains contributions useful within a certain narrower area, documentary material without analytical and theoretical processing, interprets the possibility of applying already published scientific results, or includes a concise overview of existing results in the research of the selected professional topic.

### 2. Publishing recommendation

Indicate your decision on publishing the reviewed paper by underlining or bolding one of the offered categories.

- A. Accept without changes.
- B. Accept after implementing changes, without returning the paper to reviewer for revision.
- C. Accept after implementing changes, returning the paper to reviewer for revision.
- D. Reject.

### **3. Reviewer comments**

The reviewer writes his or her comments or suggestions in the fields *A. Comment for author* and *B. Comment for editorial board*, with no limit on comment length. The reviewer should pay attention to the following questions (some do not apply to all papers) and justify his or her comments as necessary:

- Is the topic of the paper appropriate for *Studia lexicographica*?
- Are the length and structure of the paper appropriate?
- Is the title clear and does it match the contents of the paper?
- Are the keywords appropriate?
- Is the paper written clearly and logically (without contradiction)?
- Does the abstract provide enough information about the paper?
- Is there unnecessary repetition (if yes, where and what are they)?
- Are there errors in the text, figures and/or tables (if yes, what are they)?
- Is the professional terminology regular and appropriately used?
- Are/were appropriate method(s) used?
- Is the interpretation of the research results valid?
- Is the conclusion logical and based on the achieved results?
- Is the mentioned literature appropriate and relevant?
- Is the citation of literature correct and consistent?
- Were the figures prepared according to the instructions for writing papers?
- Has part of the paper been published before, or too similar to a published paper (if yes, where, and to which paper)?
- Are all the parts of the paper worthy of publishing (if no, which parts should be expanded, shortened, or removed)?
- If the paper is in English, what is the quality of the English?
- What are your suggestions for improving the text, figures, and/or tables?
- Why is the given paper category being suggested?

*A. Comment for author.*

*B. Comment for editorial board.*
