Croatian external relations
as reflected by the use of exonyms

Exonym = name used in a specific language for a geographical feature situated outside the area where that language is spoken, and differing in its form from the name used in an official or well-established language of the area where the geographical feature is situated.

(Ninth United Nations Conference on the Standardization of Geographical Names, New York, 21-30 August 2007)

Croatian *Beč* for Ger. *Wien*

Engl. *Croatia* for Croat. *Hrvatska*

General linguistic and feature-related factors influencing the use of exonyms

Exonym-promoting factors:

- (1) difficult pronunciation of the endonym
- (2) different script of the endonym
- (3) transboundary feature

Exonym-preventing factors:

- (1) good acquaintance of receiver-language speakers with the donor language
- (2) high prestige of the donor language

Factor working in both directions:

- (1) close linguistic relation donor/receiver language

Apart from these distorting factors, however,

- exonyms have been formed and maintained for features to which a community was and is closely connected in economic, cultural and political terms.
- the spatial pattern of exonym use thus reflects historical and current cultural, political and economic relations of this community.

Conclusion

Spatial spread of exonyms is largely influenced by historical as well as current political, cultural and economic relations.

Other factors are also effective and distort this pattern partially.

They are mostly linguistic like

- linguistic distance between languages
- difficulty of pronunciation
- use of trade languages
- language prestige
